

LASIK Vision Correction

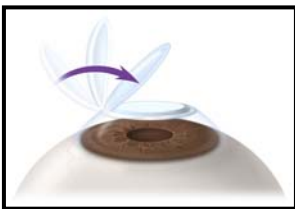

Perfect Sense
Complete Eye Care

How does LASIK work? The treatment is remarkably fast. After a corneal flap is created, the computer guided laser emits cool pulses of ultra-violet rays to cleanly and precisely remove a small amount of tissue programmed exactly to your required prescription. A small layer, no thicker than a human hair, is removed to correct the curvature of the front of your eye. The result is dramatically improved clear vision, and the majority of patients are able to drive the next day.

First, a corneal flap is created. Then, the cool-beam laser reshapes the cornea.

The corneal flap is replaced, and your vision is restored.

Where is the treatment performed? Perfect Sense Eye Care is proud to offer the latest technology for vision correction and uses state of the art Bausch & Lomb Technolas Perfect Vision technology. We can now treat almost all cases of farsightedness, nearsightedness and astigmatism. After your free lasik consultation you'll learn we can optimize your results with treatments designed to correct your specific visual disorders. The advanced diagnostics will measure your eyes and, if you qualify for treatment, our doctors will customize a treatment protocol specific to your needs.

What are the risks? Laser vision correction has passed extensive scrutiny from public health agencies, medical professionals, NASA, and the armed services, but as with all medical procedures, you should discuss any risks associated with laser vision correction with your eye doctor. It's comforting to note that the first patient to ever receive laser vision correction is still seeing 20/20 without complications. Perfect Sense has among the best results in the country with the vast majority of patients reaching 20/20 vision. With advanced, custom, wavefront guided treatments many patients achieve even better results.

Experience you can trust. Laser vision correction has been described as life-changing by patients. Imagine being able to see the alarm clock, watch television, drive, or play sports all without glasses or contacts. With natural vision, there's less to hold you back. You gain newfound freedom to do the things you enjoy most. The doctors at Perfect Sense Eye Care have been performing vision correction since 1991. Our doctors not only recommend and perform laser vision correction, they've had it themselves.

Call Perfect Sense to set up your free laser vision consultation.
